

CROTON

Water:

Keep evenly moist during the growing season with lukewarm water. Feed monthly, March through October, with an all purpose fertilizer. Reduce watering in winter. Wash leaves frequently. Crotons dislike dry air - keep out of drafts.

Light:

Good light is essential. An east or west facing windowsill is ideal. Crotons lose their extraordinary leaf color when they don't receive enough light.

Repotting:

May be repotted every one to two years in spring. Use a well-draining potting soil.

If you don't see it, please ask ~ We special order.
