

# CACTI & SUCCULENTS

## *Water:*

During the growing season, water thoroughly when the soil begins to dry out. Always use tepid water. In the late summer, begin to reduce watering and starting in late fall, water just enough to prevent shriveling. Fertilize monthly, March through September, with a special cactus fertilizer.

## *Light:*

Choose the sunniest spot available - a window sill is ideal. Some protection from intense summer sun may be necessary.

## *Repotting:*

Repot only when essential. Transfer to a pot only slightly larger than the previous one. Use a mix designated especially for cacti and succulents.

***If you don't see it, please ask ~ We special order.***
