

GLOXINIA

Flowering Period:

Will bloom two to three months, primarily in the spring and summer. When flowering period ends, gradually reduce water until the plant dies back. Place it in a cool, dark location for two to four months. Water sparingly until new growth appears. Then move it into light and resume regular watering and fertilizing.

Light:

Several hours of direct sun. Protect from intense midday summer sun.

Water:

Water thoroughly when soil is dry across the surface. Use lukewarm water. Try to avoid getting water on the leaves. Fertilize every two weeks with an african violet fertilizer during the active growing period only.

If you don't see it, please ask ~ We special order.
