

DRACAENA

Water:

Allow to partially dry out in between thorough soakings. Avoid overwatering, especially in winter. Fertilize monthly, March through November, with an all purpose fertilizer. Dry air will cause leaf tips to turn brown.

Light:

Bright indirect light. Filtered sunlight is best, but most varieties will tolerate light shade.

Repotting:

May be repotted every two to three years in the spring. Use a well-draining potting soil.

If you don't see it, please ask ~ We special order.
