

FERN

Water:

Soil must be evenly moist, not soggy, at all times; never allow to dry out. Fertilize every three weeks, March-October, with an all purpose fertilizer. Do not let stand in water and keep out of drafts.

Light:

Bright indirect light, and an east or west facing windowsill is ideal. Protect from intense midday summer sun.

Repotting:

Avoid frequent repotting. Repot in spring, only after the roots have filled the pot. Ferns enjoy being potbound. Do not bury the crown of the plant.

If you don't see it, please ask ~ We special order.
